FINAL PROJECT REPORT

DATE	**28 SEPTEMBER 2026**
TEAM ID	**6ab220cfbee0b08a2d2c63cd**
PROJECT NAME	**AUTO TICKET CLASSIFICATION USING FLOW DESIGNER**

PROJECT TITLE:

Auto ticket classification using flow designer

TEAM MEMBERS:

Nancy Mary S: Project Developer

Padmini P: Project Developer

Akil K: Project Developer

Muthu Sangeetha K: Project Developer

Muthuesakki S: Project Developer

1. INTRODUCTION

1.1 Project Overview

The auto ticket classification using flow designer project is developed to automate the classification of it support tickets in a school environment. Students and teachers raise incidents such as wi-fi issues, projector failures, password problems, and slow computer complaints. Instead of manually assigning categories, servicenow flow designer automatically identifies keywords from the

short description and assigns the appropriate category and subcategory. This improves efficiency, reduces human effort, and ensures accurate ticket routing.

1.2 Purpose

- Reduce manual work for it staff.
- Automatically classify support tickets.
- Improve response time.
- Maintain consistent ticket records.
- Provide automated email notifications.

2. IDEATION PHASE

2.1 Problem Statement

The school it helpdesk receives many incident requests every day. Staff manually review each request and assign categories, which is time-consuming and inefficient. The project automates this process using flow designer.

2.2 Empathy Map Canvas

Users:

- Students
- Teachers
- It support staff

Think:

- Need quick issue resolution.
- Want easy ticket submission.

Say:

- "Wi-fi is not working."
- "projector is not turning on."

Do:

- Submit tickets.
- Wait for support.

Pain Points:

- Manual classification delays.
- Human errors.

Gains:

- Fast ticket routing.
- Accurate classification.

2.3 brainstorming

Possible Solutions:

1. Manual categorization.
2. Script-based automation.
3. Machine learning approach.
4. Flow designer no-code automation (selected).

Reason For Selection:

- Easy to maintain.
- No coding required.
- Scalable solution.

3. REQUIREMENT ANALYSIS

3.1 Customer Journey Map

Stage	User action	System response
Ticket creation	Enter issue details	Record created
Analysis	Keyword check	Flow triggered
Classification	Assign category	Update record
Notification	Email sent	Confirmation mail

3.2 Solution Requirement

Functional Requirements:

- Automatic ticket classification.
- Category and subcategory assignment.
- Email notifications.
- Dependent choice fields.

Non-Functional Requirements:

- Scalability.
- Reliability.
- Maintainability.
- Security.

3.4 Technology Stack

Technology	Purpose
Servicenow	Platform
Flow designer	Automation
Tables	Data storage
Email notification	Alerts
Update sets	Deployment

4. PROJECT DESIGN

4.1 Problem Solution Fit

Problem	Solution
Manual classification	Automated flow
Delay in response	Instant categorization
Human error	Standardized process

4.2 Proposed Solution

The proposed system uses servicenow flow designer to automatically classify incidents based on keywords present in the short description. Categories and subcategories are assigned automatically, and email notifications are sent to users.

5. PROJECT PLANNING & SCHEDULING

5.1 Project Planning

Phase	Activity
Phase 1	Requirement analysis
Phase 2	Table creation
Phase 3	Field configuration
Phase 4	Flow design
Phase 5	Email setup
Phase 6	Testing
Phase 7	Deployment
Phase 8	Documentation

6. FUNCTIONAL AND PERFORMANCE TESTING

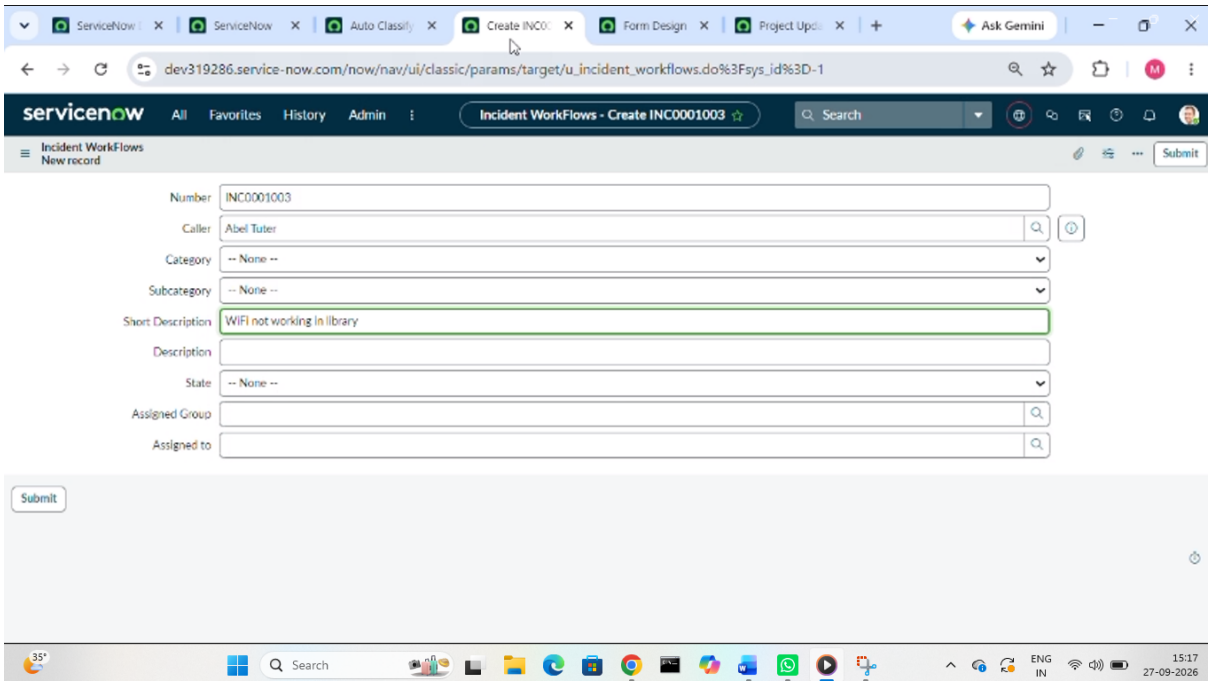

6.1 Performance Testing

Test case	Input	Expected output	Result
Wi-fi issue	Wifi not working	Network → wifi	Pass
Projector issue	Projector problem	Hardware → projector	Pass
Password issue	Forgot password	Access → password	Pass
Slow system	Slow computer	Performance → slow computer	Pass

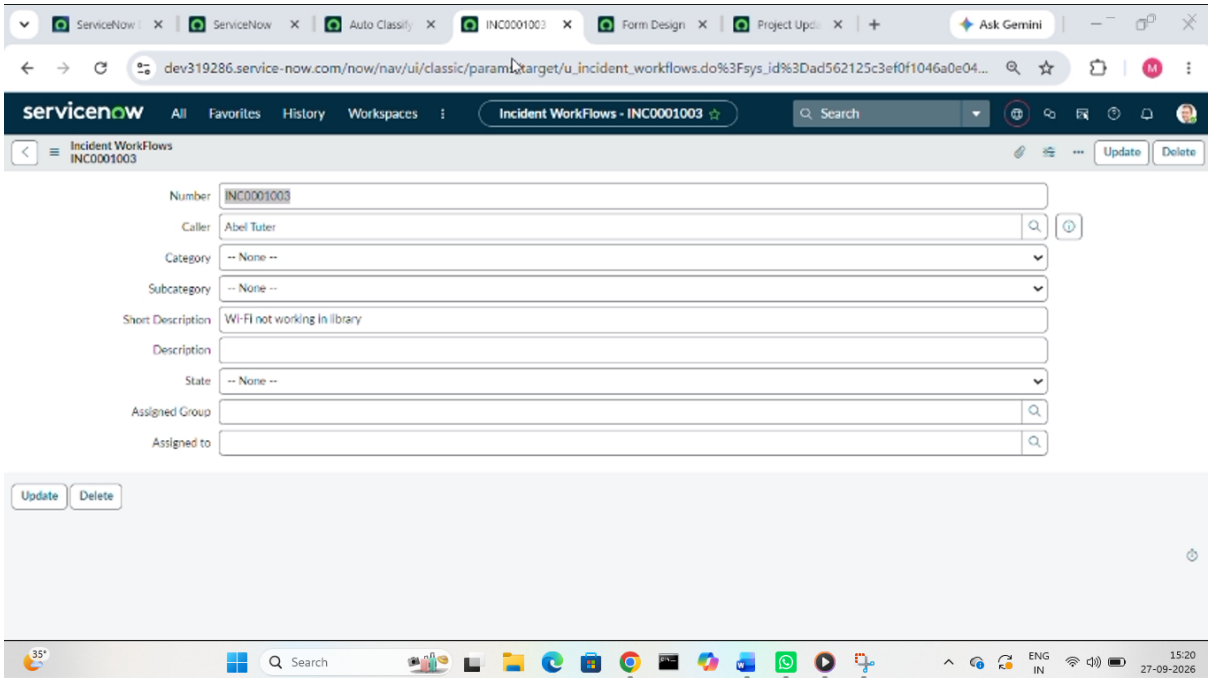

Testing confirmed correct classification and email notification functionality.

7. RESULTS

Test Scenario

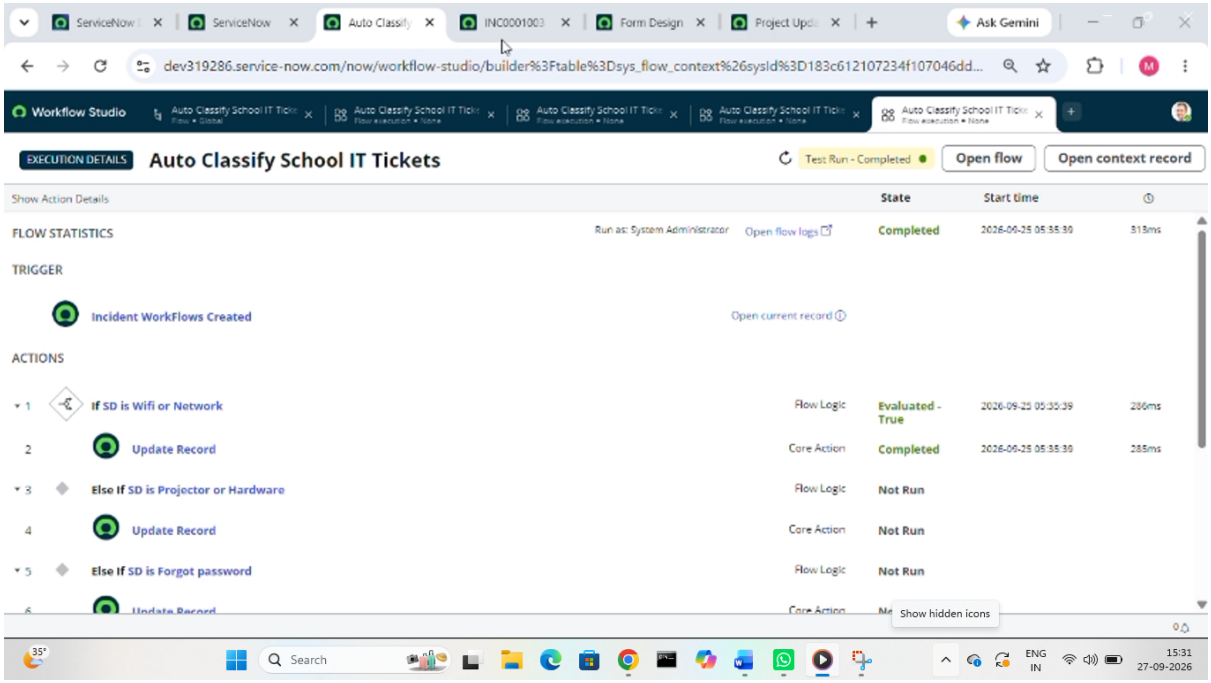

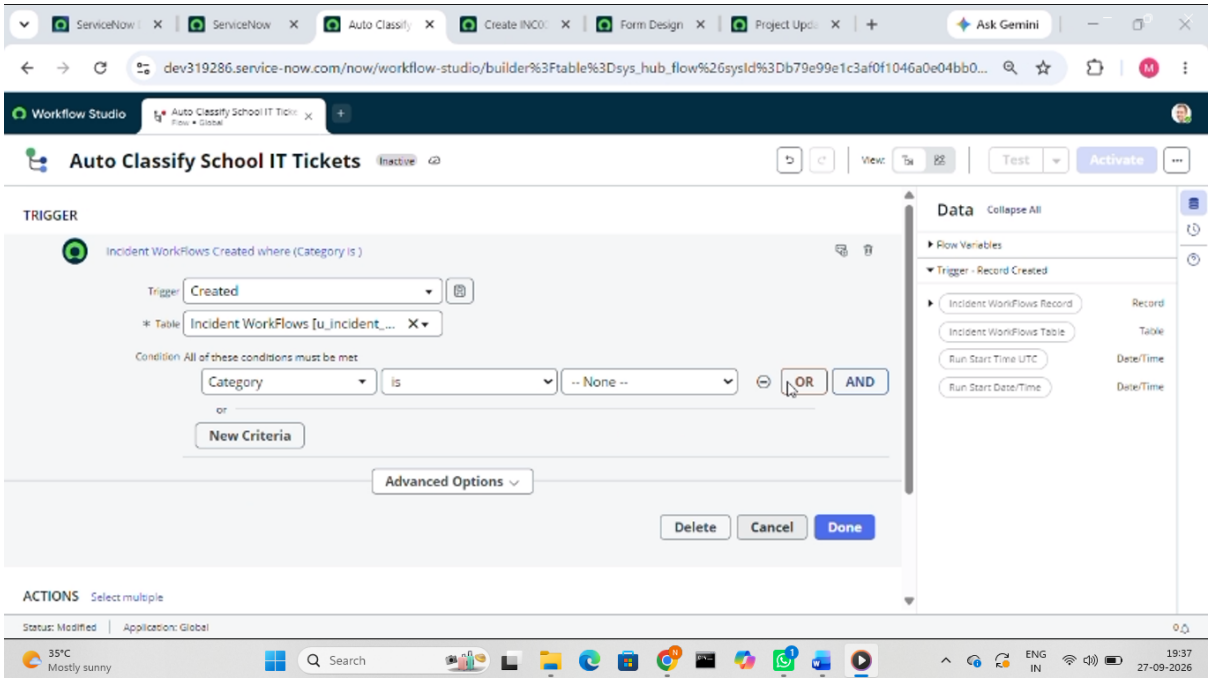

Test Scenario

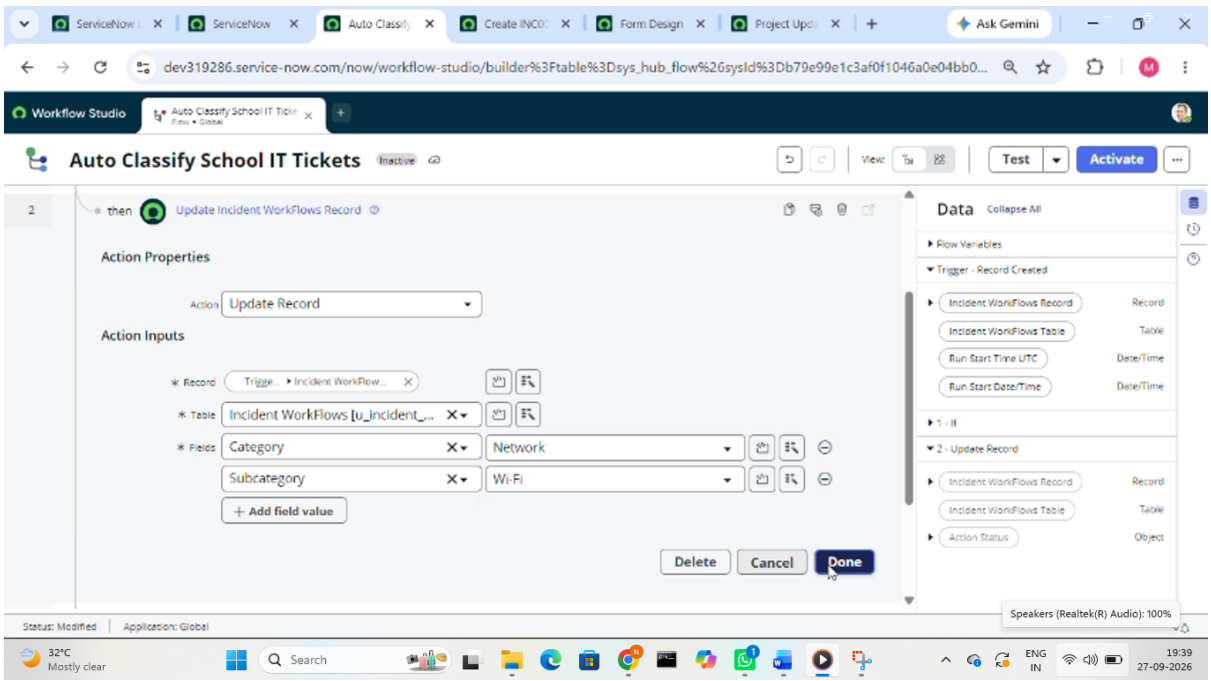

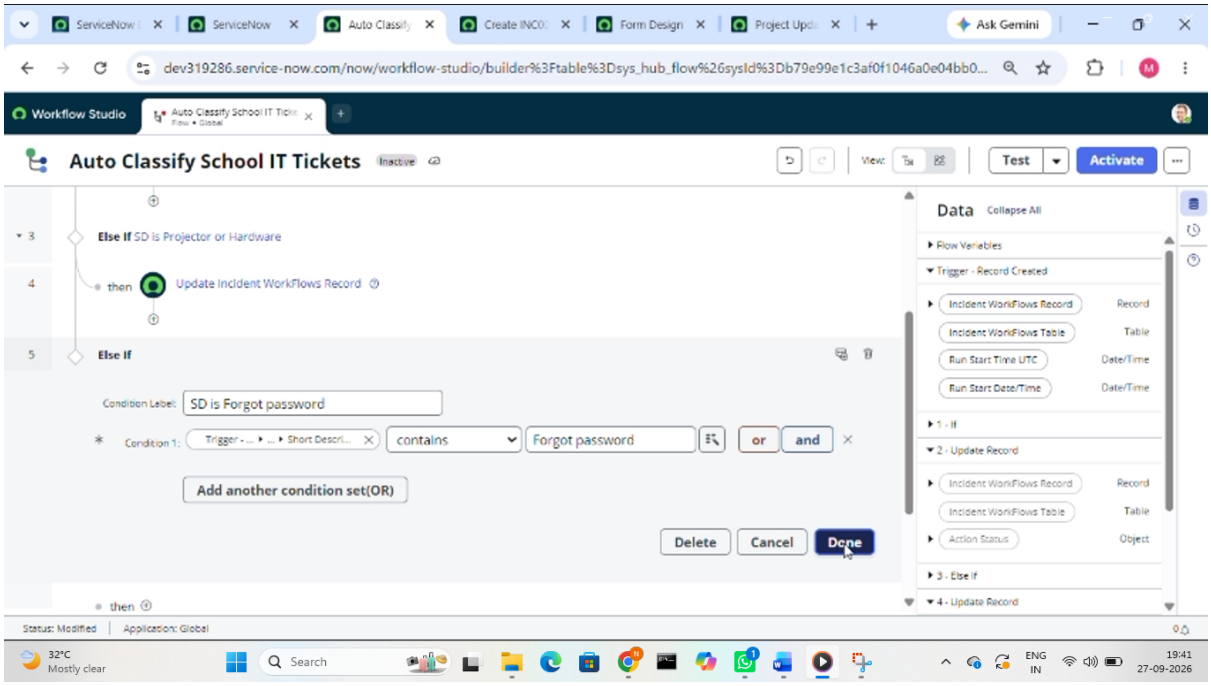

Test flow
Run your flow to make sure it has no errors before you activate it. When the test finishes running, check the execution details to see each action's configuration, runtime values, and the log messages for any errors that occurred.

8. ADVANTAGES & DISADVANTAGES

Advantages:

- Reduces manual effort.
- Faster ticket processing.
- Accurate classification.
- Easy maintenance.
- No coding required.

Disadvantages:

- Limited to predefined keywords.
- Cannot identify unknown issues.

- Requires proper configuration**.**

9. CONCLUSION

The project successfully automates school it ticket classification using servicenow flow designer. It reduces manual effort, improves efficiency, and ensures accurate ticket routing. The no-code approach makes the solution scalable and easy to maintain.

10. FUTURE SCOPE

- Ai-based classification.
- Sla management.
- Auto-assignment to support teams.
- Dashboard and reporting.
- Predictive intelligence features.

11. APPENDIX

Source code (if any)

No coding is used because the project is developed using servicenow flow designer (no-code platform)
