Project Design Phase

Solution Architecture

Date	28 September 2026
Team Id	6ab220cfbee0b08a2d2c63cd
Project Name	Auto Ticket Classification using Flow Designer
Maximum mark	4 Marks

Solution Architecture:

- The **Auto Ticket Classification using Flow Designer** system automates the process of handling support tickets. When a customer submits a ticket, **Flow Designer** receives and processes the ticket details.
- The system identifies the **ticket category and priority** and automatically assigns the ticket to the appropriate support team. Finally, the ticket status is updated and the customer can be notified.

Architecture Flow:

Customer → Ticket Submission → FLOW DESIGNER → Classification → Priority Assignment → Team Assignment → Ticket Update → Customer Notification

Example – Solution Architecture:
